Fitim Cakolli

Date of birth: 03/06/2000 | **Nationality:** Kosovar | **Gender:** Male | **Phone number:** (+383) 49587144 (Mobile) | **Email address:** fitim0306@gmail.com |

Address: "Meto Bajraktari" 14D Nr.29, 10000 Prishtinë, Kosovo, 10000, Prishtine, Kosovo (Home)

ABOUT ME

Passionate DevOps Engineer with more than four years of experience and an international education pursuing a degree in computer science. Skilled in bash scripts, docker files and configuring AWS services. I am looking forward to continuing to grow both professionally within DevOps and personally with an international and ambitious team.

WORK EXPERIENCE

LEAD PROJECT DEVOPS ENGINEER – 91LIFE – 15/10/2022 – Current – PRISHTINA, KOSOVO

Website: https://www.gobrightline.com/

Lead DevOps Engineer - Brightline

- Deliver new developed application using the serverless architecture;
- Built the cloud infrastructure using terraform in AWS;
- Setup Auth0 for user management using terraform;
- Setup Newrelic for monitoring and logging using terraform;
- Pipelines for automation of infrastructure deployment; source code deployment; mobile and web integration tests;
- Ensured application automation, security and efficiency;

Used technologies and tools:
- AWS
- Bitbucket pipelines
- AWS Lambda
- AWS services: S3; DynamoDB; AWS SES; SQS; SNS; VPC; RDS; DynamoDB; CDN; AWS AppRunner; AWS Amplify; AWS security hub; AWS Control Tower; Secrets Manager; SSM Parameter store;
- Lacework
- Wiz
- Docker
- Terraform
- Ansible

DEVOPS ENGINEER – 91LIFE – 01/06/2022 – Current – PRISHTINA, KOSOVO

Website: https://www.91.life/

DevOps Engineer - HeartPlus

- Built the cloud infrastructure using terraform in GoogleCloudPlatform;
- Automated deployment processes of application;
- Ensured application automation, security and efficiency;
- Setup and manage self-hosted gitlab in kubernetes
- Setup VPN using ansible;
- Create private domain and certificates for gitlab and dev environment(s) of application;

Used technologies and tools:
- Google Cloud Platform - GCP
- Gitlab pipelines
- GCPservices: Compute Engine; Container Registry;Cloud Virtual Network; Cloud SQL; Cloud Run;
- Docker
- Terraform
- Kubernetes
- Ansible

DEVOPS ENGINEER CONSULTANT – INSPIRE11 – 10/10/2024 – 01/12/2025 – PRISHTINA, KOSOVO

Website: https://www.inspire11.com/

- Responsible of creating CI/CD pipelines for source code deployment; integration tests; & security scans
- Prepare & document all infrastructure resources configuration and create runbook for each possible failing points
- Document and propose migration to terrafrom from clickops approach
- Configure AWS VPN to access resources in internal network
- Create; build and deploy infrastructure for two internal applications
- Optimize pipelines for source code deployment
- Implement notifications for monitoring resources and user actions accross AWS accounts

Used technologies and tools:

- AWS services: VPC; EC2; RDS; ECR; ECS; AWS Fargate; Route 53; ELB; Amazon S3; EC2; Cloudfront; AWS chatbot; AWS VPN endpoints;
- Docker
- Linux
- Trivy
- AWS CDK
- Terrafrom
- CloudFormation
- Github/Github actions
- GitLab CI/CD
- OWASP

DEVOPS ENGINEER – POLYMATHLABS – 01/11/2021 – 01/06/2022 – PRISHTINE, KOSOVO

Website: https://www.polymaths.co/

- Built the cloud infrastructure using terraform in AWS;
- Deployed and automated deployment processes for a web application;
- Monitored system performance;
- Ensured application of automation, security and efficiency;

Used technologies and tools:
- AWS
- Azure DevOps
- AWS Lambda
- AWS services: S3; Elastic Cache(Redis); AWS SES; SQS; VPC; RDS; DynamoDB; CDN
- Docker
- Azure DevOps CI/CD
- Terraform

DEVOPS ENGINEER – VISION AGENCY – 01/10/2018 – 17/10/2021 – PRISHTINE, KOSOVO

Website: https://vision-agency.ch/home

- Built the cloud infrastructure using AWS deployed and automated deployment processes for a web application, monitored system performance;
- Tested multiple websites and web applications forms and sites responses and functionalities;
- Developed 3 websites from scratch using WordPress;
- Responsible for a team of four people while monitoring and developing a web app project;

Used technologies and tools:
- AWS
- AWS services: VPC; EC2; RDS; ECR; ECS; AWS Fargate; Route 53; ELB; Amazon S3; EC2
- Docker
- GitLab CI/CD
- Linux
- Python with selenium

DAILY WORKER – INTERNATIONAL COMMITETE OF RED CROSS - ICRC – 01/06/2019 – 01/10/2019 – PRISHTINA, KOSOVO

Website: https://www.icrc.org/en/where-we-work/europe-central-asia/kosovo

- Team member that collected examined cleaned and prepared clothes of lost persons during the war in Kosovo(1999) to prepare to return to family members or museum

DAILY WORKER – INTERNATIONAL COMMITETE OF RED CROSS - ICRC – 01/09/2018 – 01/11/2018 – PRISHTINA, KOSOVO

Website: https://www.icrc.org/en/where-we-work/europe-central-asia/kosovo

◘ Team member that collected examined cleaned and prepared clothes of lost persons during the war in Kosovo(1999) to prepare to return to family members or museum

EDUCATION AND TRAINING

01/10/2018 – CURRENT Prishtine, Kosovo

COMPUTER SCIENCE Universum College

Address Prishtine, Kosovo, 10000, Prishtine, Kosovo | **Website** https://www.universum-ks.org/

05/10/2020 – 12/02/2021

COMPUTER ENGINEERING Antalya Bilim University

Erasmus +

Address Antalya, Turkey | **Website** https://antalya.edu.tr/en

LANGUAGE SKILLS

Mother tongue(s): **ALBANIAN**

Other language(s):

	UNDERSTANDING		SPEAKING		WRITING
	Listening	Reading	Spoken production	Spoken interaction	
ENGLISH	B2	B2	B2	B2	B2
GERMAN	A2	A2	A2	A2	A1

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

SKILLS

AWS-Cloud

Amazon EC2 | Code Build | Amazon VPC | AWS Cloud Formation | ECR | AWS Control Tower | AWS Security Hub | Code Pipeline | AWS ElastiCache | AWS Amplify | AWS AppRunner | ECS | AWS Lambda | AWS (S3) | AWS DynamoDB | Amazon RDS | Route 53 | Aws CloudFront | AWS CloudWatch | ELB | ECS/Fargate

DevOps

Linux | Newrelic | Ansible | Scripting in Python andor Bash | Lacework | Docker containers | CICD pipelines | Wiz | Helm chart | Git | Terraform by HashiCorp | Nginx | Azure DevOps | Docker

Databases

SQL/MYSQL | PostgresSQL

Google Cloud Platform

Kubernetes/GCP | Cloud VPC | Cloud SQL | Container Registry | Google Cloud Run | Compute Engine

PROJECTS

15/10/2022 – CURRENT

Brightline

Successfully completed a project involving the deployment of a cutting-edge application using serverless architecture. Key accomplishments include:

- Designed and implemented the cloud infrastructure in AWS using Terraform.
- Implemented user management through Auth0, employing Terraform for streamlined configuration.
- Set up New Relic for robust monitoring and logging using Terraform.

- Established automated pipelines for infrastructure deployment, source code deployment, and integration testing for both mobile and web applications.
- Ensured comprehensive application automation, security, and efficiency.

This project leveraged a wide range of technologies and tools, including AWS services (S3, DynamoDB, AWS SES, SQS, SNS, VPC, RDS, DynamoDB, AWS Cloudfront, AWS AppRunner, AWS Amplify, AWS Security Hub, AWS Control Tower, Secrets Manager, SSM Parameter Store), Bitbucket pipelines, AWS Lambda, Lacework, Wiz, Docker, Terraform, and Ansible to deliver a robust, high-performing, and secure application.

10/2024 – 12/2025

FleetPulse

I worked on the infrastructure and DevOps side of **FleetPulse**, a fleet intelligence and telematics platform that provides real-time vehicle tracking, diagnostics, and analytics for commercial fleets.
During this project, I focused on building a secure, scalable, and fully automated AWS environment to support high-availability services and continuous delivery.
Some of the key contributions include:

- Designed and provisioned AWS infrastructure using Terraform and CloudFormation, migrating from manual (ClickOps) configurations to Infrastructure as Code for better consistency and maintainability.
- Built and optimized GitLab CI/CD pipelines to automate infrastructure provisioning, application deployments, integration testing, and security scans.
- Containerized applications with Docker and deployed them using Amazon ECS and AWS Fargate.
- Configured core AWS networking components including VPC, subnets, security groups, Route 53, ELB, and AWS VPN to ensure secure communication between internal and cloud environments.
- Implemented automated security scanning with Trivy and integrated OWASP best practices into the CI/CD workflows.
- Set up monitoring, logging, and alerting, including AWS Chatbot notifications, to track infrastructure health, performance metrics, and user activity across AWS accounts.
- Prepared detailed documentation and runbooks covering infrastructure setup, configurations, and incident response procedures.
- Built and deployed infrastructure for internal applications supporting FleetPulse operations.

Technologies used include AWS services (VPC, EC2, RDS, ECR, ECS, Fargate, Route 53, ELB, S3, CloudFront, AWS VPN, AWS Chatbot), Terraform, CloudFormation, GitLab CI/CD, Docker, Linux, Trivy, and OWASP standards.
The result was a more reliable, secure, and automated cloud environment that improved deployment speed, reduced manual errors, and strengthened overall platform stability.

02/11/2021 – 01/06/2022

IMS - Inventory Management System

I was a part of the team responsible for developing IMS, an inventory management system. My role involved using Terraform to establish the AWS infrastructure. Given the serverless nature of the application, I leveraged various AWS services, including Lambda, RDS, ElasticCache (Redis), DynamoDB, VPC, CDN, and S3, to build the required infrastructure.
To facilitate continuous integration and deployment (CI/CD), I utilized the Azure DevOps package of tools.

01/04/2020 – 10/08/2020

Butterfly

I had the privilege of working as a DevOps engineer on the Butterfly academic platform, created for high schools and universities. My responsibilities included crafting the infrastructure and all essential components required for web application deployment, all hosted on AWS cloud services.
In this project, I used a range of AWS tools, such as VPC, EC2, RDS, ECR, ECS, AWS Fargate, Route 53, ELB, Amazon S3, EC2. To ensure effective continuous integration and deployment (CI/CD), I relied on the GitLab pipelines. Docker was used to allow me to build and push containers to the cloud infrastructure. Additionally, I successfully configured and managed the NGINX web server for optimal performance.

10/04/2019 – 25/04/2019

CashHouse

I was involved in a dynamic project centered around a high-speed credit website in Switzerland. My responsibilities were testing multiple web forms to ensure they met the exacting standards expected of a credit company. Additionally, I tested the site's responsiveness and functionality as a Quality Assurance engineer, harnessing Python with the Selenium library to facilitate this critical task.
